

Instructions on how to run the Streamlit_Test_Divinus file (main file for the project):

Only need to run this file. Generates an ngrok link which shows the streamlit app I made.

Download all the images from the images folder, as well as the nyc-neighborhood.geojson.json file, upload them all on the Streamlit_Test_Divinus file.

Run everything but the last cell in Streamlit_Test_Divinus:

```
[ ] 1 ngrok.kill()  
    2 !pkill streamlit
```

All cells but this one^

Use that cell if you ever encounter an error where you go over the allocated number of calls per minute for ngrok, then rerun these two cells:

```
[17] 1 !streamlit run app.py &>/dev/null &  
  
[18] 1 from pyngrok import ngrok  
    2 public_url = ngrok.connect(8501)  
    3 public_url
```

Click on the generated ngrok link to access the website.
